PÓŁNOCNOKASZUBSKA LGR PLGR FLAG

- We are located on the Baltic sea coast north of the city of Gdańsk.
- The area has valuable natural assets - many of them protected.
- The main economic activities are tourism, fishing and fish processing

Protection of the environment or natural heritage is one of the main aims in our Strategy.

Sustainability is an extremely urgent and universal concern. Action on small changes can make a big difference, so that is why PLGR engages community members in thinking through economic, social and environmental priorities in our area and how to tackle them.

Environmental education

We have opened a small educational centre for renewable energies

Benefits of Environmental Education:

Environmental education is a process that allows pupils to explore environmental issues, engage in problem solving, and take action to improve the environment. As a result they develop a deeper understanding of environmental issues and have the skills to make informed and responsible decisions.

After implementing the project with
environmental education
we have decided to guide stakeholders in
the right direction

-

and that`s how we got the case of
Zdzisław Karsznia Elektro-Uслуги,
a local company providing energy
transmission services.

WIND TURBINE

Project helped to educate society about climate change – customers have a chance to see how this operation and technical possibilities can work, the location has been also a successful place for school visits. In the first 19 months since the ending of the project, approximately 450 children from kindergartens and primary schools have come to visit the enterprise to learn about renewable energies.

- Environmental strategy became our long-term orientation.
- Our future strategy will focus on how to manage the environmental practices to gain a good fit with its stakeholders' expectations.
